

## SOLUTION OVERVIEW

# Remote Monitoring & Control

Samsara turns operational data into business value for industrial customers.

Optimize performance and resolve issues quickly through real-time monitoring, alerts, analytics, reporting, and control in a single platform.

### GAIN COMPLETE VISIBILITY

Collect and visualize real-time data from all of your assets, including older and disparate equipment

### MAXIMIZE EFFICIENCY

Identify, diagnose, and resolve issues in real-time to minimize downtime and maximize efficiency

### IMPROVE PRODUCTION

Track and optimize process variables, like flows, temperatures, and levels, to improve production and ensure the best customer service

## Industrial Gateways

The Industrial Gateways provide centralized data collection, onboard storage, local control, secure communication, and built-in LTE cellular service for cloud connection. Connect to sensors or devices using common industrial protocols like Modbus TCP/RTU, OPC-UA, EtherNet/IP, ROC, or MQTT.

## Real-Time Cloud Dashboards

### MONITORING

Gain remote, real-time visibility into operational data like pressures, flows, and levels from a computer or mobile device to reduce on-site visits

### ANALYSIS

Identify the root cause and quickly resolve issues by comparing data across assets and sites over time

### REPORTS

Simplify compliance reporting with instant access to downloadable reports on historical data

### OPEN API

Collect data directly via API in real-time or automatically send operational data to enterprise apps to improve back-office efficiency

### ALERTS

Minimize downtime and prevent liabilities with easy to configure alert notifications for emails, texts, or phone calls

### CONTROL

Enable operators to respond to leaks, drops in pressure, and other issues instantly with remote control of setpoints and on/off switches
